

**Monitor employees or contractors 24/7.
Include a duress alarm button to
communicate exact locations and have
a level of safety second to none.**

This tracking and alarm solution is a low cost and reliable combination of the Satellite, GSM hardware connecting directly to a wireless Duress Pendant with SkyNet's web tracking and monitoring application.

An alarm or duress situation where a staff member needs to relay an exact location can be monitored 24/7 via the Internet or a security monitoring company. In the event of an alarm, personal phone calls, SMS or email message can be sent to colleagues or a monitoring service. The decision to send a security patrol car, assistance or police to the location can be made on the spot.

User friendly web interface

- Duress alarms
- History log
- View all staff
- Customised view
- Alerts SMS, email
- Global map zoom to street level
- Historical Reports by Street name

Duress Alarm

A Lithium Battery Powered wireless duress pendant connected to its Satellite/GSM tracking device so this may be remotely activated from a great distance ensuring a concealed duress function is always close at hand.

GSM Tracking

- Conform to legislative demands;
- Increase staff confidence levels;
- Track and monitor personnel;
- Reduce insurance premiums;
- Personal security . duress alarms;
- Promote and protect company image;
- Demonstrates accountability;
- Instant accessibility of team location;
- Mobile phone communication;
- Confirm vehicle and job logs.

SkyNet & Personal Duress

The concept uses the Fleet Information System (FIS) web interface.

The web interface can be accessed from any internet capable computer and from it all features can be accessed.

- Monitor an unlimited number of vehicles and/or personnel;
- Request positions from vehicles and personnel at any time;
- Use the street level map reference to see the location of the vehicle, staff member or entire fleet.

Low Ongoing cost: SkyNet can utilize its hybrid unit that runs on GSM telemetry when available and only switches to satellite telemetry when necessary

Custom solutions can be designed and built by SkyNet on specific requirements, e.g. to show cabin doors opening or the vehicle leaving an area or state;

Alerts are by either SMS or email. Have everything monitored 24/7 by a security company;

Real-time mapping: View speed, direction and location on a scalable map in real-time, 24/7;

Speed Alert: Be notified when a predefined speed has been exceeded by a tracked person or vehicle;

SMS & Email Alert: Receive notification when a vehicle has been accessed or has left a certain area;

History: After tracking, view historical data on past positions and activity.
