

SatTrack Duress and Tracking on Android

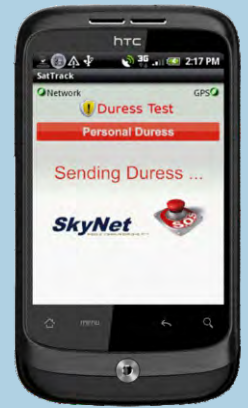

The next generation mobile applications.

You have been asking for it and now it is here: SatTrack Duress and Tracking on select models of Android smartphones.

With SkyNet's unique 'Press and Hold' alert function, a duress alarm can be discreetly activated and confirmation received simply and easily. With the capability to be interfaced with 24 /7 monitoring, SatTrack Duress is the safety solution of choice. In addition, location information and Job dispatch functions are also available via SkyNet's FIS web interface.

* SatTrack is also still available on select BlackBerry and Windows Mobile.

SatTrack Micro : Small but mighty safe

The SatTrack Micro is a small lightweight personal safety device that can be carried on a key ring or discreetly on a person, providing a dedicated duress (SOS) button with transmission and acceptance confirmation. Also capable of integrating with 24/7 monitoring.

What's more, the SatTrack Micro also allows you to view your personnel's location or track a variety of assets, both in real time or historically.

Iridium 9575 : Remote tracking, duress alarm and voice communications in one handheld

Providing GPS functionality along with a dedicated duress button, the Iridium 9575 Extreme is one tough satellite phone. Offering global coverage, this rugged, all in one handset allows a person to trigger an alarm just about anywhere and have their location transmitted within seconds.

With integration into SkyNet's Fleet Information System (FIS), the exact location can be viewed in real time while you call back the person to verify what the problem is. Up until now this would have necessitated the need for 2 devices, however the Extreme will allow these functions to be incorporated into the 1 handset. Find out more by calling SkyNet Satellite Communications today.
