

SkyNet

MOBILE COMMUNICATIONS PTY LTD

Fleet Tracking and Communications

SkyNet MultiTrack is the package that fleet owners have been waiting for. **MultiTrack** offers a combination of GPS tracking, programmable four signal inputs and a pin hole camera option, coupled with all the back end tracking facilities every business wants but cant always justify. **SkyNet** provides street level GPS accurate mapping and Street and Suburb name reports. It also features duress or breakdown alarms together with mobile Group messaging

CUSTOM SOLUTIONS can be designed and built by SkyNet on specific requirements, eg, to show a vehicle stopped for a predetermined time period or the vehicle leaving or entering a defined prohibited area.

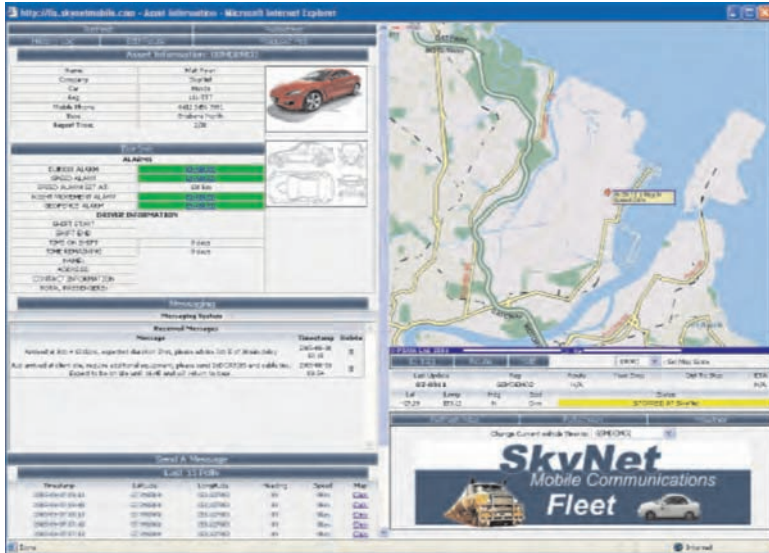

ALERTS are by SMS, email or direct to the web interface. Have everything monitored 24/7 by a security company;

REAL-TIME MAPPING : view speed, direction and location on a scalable map in real-time, 24/7;

SMS & EMAIL ALERT : Receive notification when predefined limits have been exceeded, eg, a vehicle has been accessed or has left a certain area;

ALARM LOGS can be downloaded or printed at any time;

HISTORY : After tracking, view historical data on past positions and activity.

Setup your own **duress alarms** or **breakdown alerts**. These are sent via GPRS back to an operations area or a monitoring call center.

Activate your **Remote Camera** on events to take images and send them directly back to the web site, to be downloaded.

Define boundaries where vehicles are prohibited to go, and be notified of breeches on the tracking interface and call center log.

Route History will be fully recorded at the secure data center to be downloaded or printed as required.

Fleet View shown as a single fleet view of all assets at their current location.
